Mar – 2024

Projects

ESS- Employee Self Service Portal

Description: The Employee Self Service Portal is a versatile web application for HR management and employee services. It offers comprehensive functionalities such as employee management, attendance tracking, leave management, and performance evaluation.

Role and Contribution: As a frontend developer, I was a part in designing UI for application and I implemented the application with well readable, maintainable and reusable codes with free of bugs.

Tech Stack: VueJs, Asp.Net Core, C#, MySQL.

Saviourz

Description: The Saviourz is a web and mobile application for online hospital and doctor consultations in New Zealand. It allows patients to schedule appointments, access prescriptions, and view health records, ensuring continuity of care.

Role and Contribution: As a frontend developer, I was a part in designing UI for application and I implemented the application with well readable, maintainable and reusable codes with free of bugs.

Tech Stack: VueJs, Asp.Net Core, C#, MySQL.

WAKA

Description: Waka is a versatile web and mobile ridesharing application for a New Zealand-based customer, offering seamless taxi booking services. Users can easily book taxis via web and mobile interfaces, ensuring a convenient transportation solution. The app aims to enhance mobility options and improve transportation accessibility in New Zealand.

Role and Contribution: As a developer, played a key role in designing the database and code architecture for the application, and I built the admin console in frontend and developed the entire backend code with readable, maintainable, reusable, and bug-free code.

Tech Stack: React Js, Node, Flutter, MySQL.

Certifications

[The Complete Java Certification Course](#)

[JDBC Servlets and JSP- Java Web development Fundamentals](#)

[CSE1309x: Python Programming](#)

[Azure Developer Associate \(AZ-204\)](#)

Milkpot

Description: Milkpot is a comprehensive web and mobile application for online milk retail. It offers features such as wallet management, subscription services, online payments, cart, and delivery tracking. Users can conveniently purchase milk products and manage subscriptions through both web and mobile interfaces.

Role and Contribution: As a full stack developer, I was a part in designing UI for application and designing the database and code architecture for the application. I developed the entire backend code with readable, maintainable, reusable, and bug-free code.

Tech Stack: Node, Vue Js, Flutter, MySQL.

BuyOProperty

Description: A comprehensive web application where user can buy properties nationwide. It offers a convenient way to browse, list, and manage properties, while collecting data on user preferences.

Role and Contribution: As a full stack developer, I was a part in designing UI for application and designing the database and code architecture for the application. I developed the entire backend code with readable, maintainable, reusable, and bug-free code.

Tech Stack: Node, Vue Js, PostgreSQL.

Trailer Tracker

Description: Trailer Tracker is a comprehensive web and mobile application for booking trailers for import and export containers between harbour ports. It enhances logistics efficiency by facilitating seamless coordination and management of trailer bookings.

Role and Contribution: As a full stack developer, I was a part in designing UI for application and designing the database and code architecture for the application. I involved in development of the entire admin console and backend code with readable, maintainable, reusable, and bug-free code.

Tech Stack: Node, Vue Js, Flutter MySQL.

Serenity Hostel Management System

Description: It is a comprehensive web and mobile application for booking and managing luxury hostel rooms. It offers features such as online Payment, notification system for fees payment etc.

Role and Contribution: As a full stack developer, I was a part in designing UI for application and designing the database and code architecture for the application. Also, a part in development of the frontend and backend code with readable, maintainable, reusable, and bug-free code.

Tech Stack: Node, Vue Js, Flutter MySQL.

Marketspark

Description: MarketSpark is a comprehensive solution designed to digitalize POTS (Plain Old Telephone Service) lines through IoT router devices. The project involves developing a web application in Microservice architecture for real-time tracking and monitoring of these devices.

Role and Contribution: As a full stack developer in offshore for this project, I led this project in offshore by attending the client meeting for requirement discussion and involved in development of the frontend and backend code with readable, maintainable, reusable, and bug-free code.

Tech Stack: Node (NestJs and Express), React, PostgreSQL, AWS (ECR, ECS, EC2, API Gateway, S3, CloudWatch, Lambda, SNS, SQS, EKS, and Redis Queues).

Regulatory Enforcement Action Compliance Tracking (REACT):

Description: The web application for Compliance Tracking (REACT) module for US Client to identify inspections conducted by authorized regulatory agencies. REACT allows for identify and manage Formal Enforcement Actions (ENFs), Notices of Violations (NOVs), Compliance Agreements (CAs) and even Significant Non-Compliance (SNC) activities.

Role and Contribution: As an only full stack developer in offshore for this project, I involved in development of the frontend and backend code in Microservice architecture with readable, maintainable, reusable, and bug-free code.

Tech Stack: Angular, ASP.Net core, C#, MSSQL, Azure (ACR, WebServices, Azure storage, App Insights, Key Vaults, Azure devops).
